# FEWD Week #2 Project: Styling with CSS

## Description

A hot, new NY Tech Startup, Relaxr, has approached you to help them develop a new landing page for their company. They've handed you the design file for the site, along with the copy and assets. You need to take these files and turn it into a landing page.

Student: _____

Project URL: _____

| Technical Requirements | Does Not Meet Expectations (0) | Meets Expectations (1) | Exceeds Expectations (2) |
|---|---|---|---|
| Use HTML5 structural elements (nav, header, footer) | | | X |
| Use a CSS Reset file in addition to your | | | X |

style.css file to style
the page

Use IDs and Classes
to to select and                                                                  X
style elements on
the page

Style your text with
the Google Fonts
provided by your                                                     X
style guide

Follow naming
conventions,
maintain                                                             X
consistency across
.html and .css files
and use best
practices for
naming IDs and
Classes

Indent nested
elements to
increase your code's                                                              X
readability

Use float/clear or
the width property
to create more than
one column on your
page
